ACTIVITY REPORT

Name of the Activity	6 days FDP on Liposomes from basics to drug delivery	
Date and Time of Activity	06.02.2017 to 11.02.2017	11.00am to 1.00 pm
Details of Participants	28	
Resource Person	Dr.Prahlad	
Description	<p>Our principal greeted all the dignitaries and delegates and then gave a statement outlining the scientific community and general public have been exposed to a series of achievements attributed to a new area of knowledge: Nanotechnology. The HOD emphasised the significance and goals of this faculty development project.</p> <p>The Guest discussed about Liposomes have been extensively studied and are used in the treatment of several diseases. Liposomes improve the therapeutic efficacy by enhancing drug absorption while avoiding or minimizing rapid degradation and side effects, prolonging the biological half-life and reducing toxicity. The unique feature of liposomes is that they are biocompatible and biodegradable lipids, and are inert and non-immunogenic. Liposomes can compartmentalize and solubilize both hydrophilic and hydrophobic materials. All these properties of liposomes and their flexibility for surface modification to add targeting moieties make liposomes more attractive candidates for use as drug delivery vehicles. There are many novel liposomal formulations that are in various stages of development, to enhance therapeutic effectiveness of new and established drugs that are in preclinical and clinical trials.</p> <p>Following each session, participants were given a test, and those who passed were awarded certificates.</p> <p>During this FDP programme, participants provided comments and discussed their experiences. The Principal gave a summary report, and the guest of the event also spoke and commended the FDP team on a job well done. Finally, a vote of gratitude was suggested by the HOD to conclude the programme.</p>
